“Laser Vision for Life” Patient Confirmation

At The Toledo LASIK Center, we are so confident in our patient’s long-term stability of their laser vision correction that we stand behind the results-- FOR LIFE!

However we cannot guarantee our patients will always have perfect distance vision, but we will do everything we can to help our patients maintain the best distance laser vision correction possible. An enhancement may be performed for any change in uncorrected distance vision of more than three lines. Example:

For patients who are 20/20 best corrected pre-operatively - If after laser vision correction at The Toledo LASIK Center, the vision changes due to refractive regression or progression, to below 20/40 unaided, we will be happy to offer a re-treatment procedure, with the same laser vision correction technology used in the original surgery, at no additional cost. No enhancement will be performed less than three months from the date of the original surgery.

Requirements:

1. The vision reduction cannot be the result of an eye disease, injury, or temporary fluctuation in vision.
2. The surgeon must feel that the re-treatment will be medically advisable, with no undue risk of complication, and that it will help improve your distance vision.

3 To retain eligibility, the patient must have completed all post-operative examinations required by our facility. These are as follows: 1 day, 1 week, 1 month, 3 months and 6 months. In addition, **patients are to have an eye health examination every 12 months with a licensed optometrist or ophthalmologist following LASIK. Annual Eye Exams are not included in the Lifetime Enhancement, they are chargeable. Failure to comply with these requirements will result in a fee to perform the enhancement at the current rate for enhancements at that time.**

4. The Toledo LASIK Center reserves the right to exclude certain complicated cases and presbyopia (normal age-related near vision loss) correction from this program. Near vision from monovision correction is not guaranteed.
5. This warranty covers the patient for enhancements utilizing the same laser technology as used in their primary procedure. Newer technology, as it becomes available, may incur additional costs for enhancements.

Based on national and international results with our current laser technology, very few of our patients will ever need a re-treatment procedure. Since we can’t predict which patients will require this service, our Laser Vision for Life program gives our patients assurance of a lifetime of care to help them maintain the best distance vision possible.

I have read and understand the above requirements for re-treatment:
